

Final sample and testing update:

- Testing in New York is now complete on the final round of samples from Canada, New York, Chicago and Miami.
- Delhi and Chandigarh are about to begin their final round of testing as well as running additional neutralisation assays which have been sent from Oxford.
- We have received serology data on the Belgium and Oxford final timepoint samples.
- London, Japan, Hong Kong and Sweden final timepoint samples will be sent to Porton Down for testing imminently.

Analysis update:

The *baseline analysis* is well and truly underway, final analysis will be completed by end of June, planned publication in July.

The *post vaccination analysis* (timepoint 2) is currently being cleaned and the statistician will receive this very soon to begin the analysis.

A busy summer of writing ahead!

Future Studies:

Due to the unique working group created through ICARUS, the team have begun discussions on the possibility of future studies.

As Covid studies may no longer be of interest, it has been suggested that we could look at other aspects of IBD.

The next **ICARUS International meeting** will be on **Tuesday 5th July** and we invite you all to brainstorm and share ideas on the future of ICARUS and the wealth of data which has already been generated.

If you have any ideas in the meantime, please do get in touch as we are in an exciting position and it would be great to discuss!
