

## ICARUS-IBD Sample Update:

The second round of testing (approximately 1 month post vaccination) has begun in Oxford, and we have received the serological data for both the Belgium and Oxford cohort.

The Oxford team are now preparing the next shipment to be sent for testing which will include the samples collected from London, Japan, and Hong Kong. We are hoping to receive samples from France and Sweden in the coming weeks.

As soon as the Roche kits arrive in New York, the team are ready to run the assay on samples from New York, Canada, Miami, and Chicago.

Delhi and Chandigarh have been running the Roche assay in their own labs. The Oxford Team are currently preparing to send the neutralisation assays to both sites.

Site recruitment as of 28/01/22.

**Total: 4099**

## Third Timepoint:

The third and final phase of serological testing will focus on samples which are approximately 1 month post booster vaccination.

Our unique ICARUS-IBD cohort will produce data which is original due to location, varying medications, and vaccination strategy.

## Minimal Dataset:

A minimal dataset template was created for those sites who preferred this option to capture their clinical data.

This has been circulated however, if you do not have a copy or if you have any questions, please do get in touch.

The team would be most grateful if this could be completed for each timepoint to ensure the clinical data can be analysed with the serological data.
